(Key topics: the Earth, minerals; sedimentary, igneous and metamorphic rock, volcanoes, weathering, erosion, rock cycle, silicon, gems, boron, aluminum, energy, oxidizers, physical

equilibrium, chemical equilibrium, careers) IPC consists of twelve chapters of text and twelve companion student activity books. This course introduces students to the people, places and principles of physics and chemistry. It is written by internationally respected scientist/author, John Hudson Tiner, who applies the vignette approach which effectively draws readers into the text and holds attention. The author and editors have deliberately avoided complex mathematical equations in order to entice students into high school level science. Focus is on the people who contributed to development of the Periodic Table of the Elements. Students learn to read and apply the Table while gaining insight into basic chemistry and physics. This is one of our most popular courses among high school students, especially those who have a history of under-performance in science courses due to poor mathematical and reading comprehension skills. The course is designed for two high school transcript credits. Teachers may require students to complete all twelve chapters for two transcript credits or may select only six chapters to be completed for one transcript credit for Physical Science, Physics, or Chemistry. Compliance with state and local academic essential elements should be considered when specific chapters are selected by teachers. As applicable to local policies, transcript credit may be assigned as follows when students complete all 12 chapters: Physical Science for one credit and Chemistry for one credit, or Integrated Physics and Chemistry for two credits. (May require supplemental local classes/labs.)

A Basic Course in Geometry is a high school and college level textbook that is designed for everyone with an interest in geometry. It is filled with clear and concise definitions and examples of basic to complex concepts. The 2013 edition of this widely used textbook includes 461 figures, 150 tables, and a 722 term glossary. To assess student understanding, there are also 13 chapter tests and a final exam. The structure of this textbook and the ABC Method of Instruction will allow you to successfully learn geometry. A willing and motivated student can be taught any subject. Geometry is a branch of mathematics which studies spatial relationships and spatial structures. It is concerned with the properties and relationships of points, lines, angles, curves, surfaces, and solids. As geometry is a highly visual subject, almost every concept or problem is accompanied by a figure or table. This textbook is a basic course in geometry. It assumes the student has little or limited knowledge of geometry, which means terms and concepts are explained before they are extensively used. It starts with basic concepts, and then builds upon them to develop more complex ideas. Each of the chapters, 1-13, explains a group of related geometric topics with detailed descriptions and examples. There are 13 chapter tests. Chapter 14 is the comprehensive final exam. Appendixes and an index follow Chapter 14. The chapters of this textbook are as follows: Chapter 1 - Concepts and Standards; Chapter 2 - Angles; Chapter 3 - Polytopes; Chapter 4 - Polygons; Chapter 5 - Triangles and Quadrilaterals; Chapter 6 - Polyhedron; Chapter 7 - Polyhedron Solids - Part 1; Chapter 8 - Polyhedron Solids - Part 2; Chapter 9

- Two Dimensional Non-polytopes; Chapter 10 - Three Dimensional Non-polytopes; Chapter 11 - Spherical Geometry; Chapter 12 - Geometric Constructions; and Chapter 13 - Geometric Proofs. Geometry is a fun type of mathematics. You will learn many new and interesting things during this geometry course. Are you ready to begin your educational journey? When you turn to the first chapter, your journey will begin. Cover design: Sunrise - Each day brings opportunities to learn something new. Let today be the beginning of your journey on your path to enlightenment and self-actualization. Note: A Basic Course in Geometry is printed in five parts. You must purchase Part 1, Part 2, Part 3, Part 4, and Part 5 separately. Together, they make a complete geometry textbook!
