Professionals is for professionals and students working in all areas of media (film/video, photography, multimedia, web, graphics, and broadcast) who need to know what the law requires and how they should properly utilize copyrights and trademarks. This book outlines critical concepts and applies them with explanations in real-life applications,

including many cases from the author's own practice as well as those of various media professionals. This 256 page text is a practical guide designed to provide its reader with a firm understanding of the principles underlying the ownership and use of content, so that when questions arise, they will be able to make correct, well-informed decisions- whether concerning

their personal works, or works of others that a company wishes to copyright or trademark. In addition, the reader will be more capable of exercising sound judgment in structuring employment and contract relationships and of acquiring and/or licensing works, which are at the core of the business of communicating.

Emerging Issues in Workouts & Bankruptcies

Taylor & Francis
This comprehensive resource demonstrates how wireless sensor network (WSN) systems, a key element of the Internet of Things (IoT), are designed and evaluated to solve problems associated with autonomous sensing systems. Functional blocks that form WSN-based systems are described, chapter by chapter,

providing the reader with a progressive learning path through all aspects of designing remote sensing capabilities using a WSN-based system. The development and a full description of fundamental performance equations and technological solutions required by these real-time systems are included. This book explores the objectives and goals associated with tactical intelligence,

surveillance, and reconnaissance (T-ISR) missions. Readers gain insight into the correlation between fine-grained sensor resolution associated with WSN-based system complexities and the difficult requirements associated with T-ISR missions. The book demonstrates how to wield emergent technologies to arrive at reliable and robust wireless networking for

T-ISR and associated tasks using low-cost, low-power persistent sensor nodes. WSN is broken down into constituent subsystems, key components, functional descriptions, and attendant mathematical descriptions. This resource explains how the design of each element can be approached and successfully integrated into a viable and responsive sensor system that is

autonomous, adaptable to mission objectives and environments, and deployable worldwide. It also provides examples of what not to do based on lessons learned from past (and current) systems that failed to provide end users with the required information. Chapters are linked together, in order of system assembly (concepts to operation), to provide the reader with a

full toolset that can help deliver versatility in design decisions, solutions, and understanding of such systems, end to end.

Design/deployment/Performance and evolution towards 5G
This book is a practical guide to the design, deployment, and performance of LTE-A,

VoLTE/IMS and IoT. A comprehensive practical performance analysis for VoLTE is conducted based on field measurement results from live LTE networks. Also, it provides a comprehensive introduction to IoT and 5G evolutions. Practical aspects and best practice of LTE-A/IMS/VoLTE/IoT are presented. Practical aspects of LTE-Advanced features are presented. In addition,

LTE/LTE-A network capacity dimensioning and analysis are demonstrated based on live LTE/LTE-A networks KPIs. A comprehensive foundation for 5G technologies is provided including massive MIMO, eMBB, URLLC, mMTC, NGCN and network slicing, cloudification, virtualization and SDN. Practical Guide to LTE-A, VoLTE and IoT: Paving the Way Towards 5G

can be used as a practical comprehensive guide for best practices in LTE/LTE-A/VoLTE/IoT design, deployment, performance analysis and network architecture and dimensioning. It offers tutorial introduction on LTE-A/IoT/5G networks, enabling the reader to use this advanced book without the need to refer to more introductory texts. Scholars have</p>
---	--	--

considered how best to apply existing law to new technological problems but they also have returned to first principles, considering fundamental questions about what law is, how it is formed and its relation to cultural and technological change. This collection brings together many of these seminal works, which variously seek to interrogate assumptions about the nature of communication, knowledge,

invention, information, sovereignty, identity and community. From the use of metaphor in legal opinions about the internet, to the challenges posed by globalization and deterritorialization, to the potential utility of online governance models, to debates about copyright, free expression and privacy, this collection offers an invaluable introduction to cutting-edge ideas about law and

society in an online era. In addition, the introductory essay both situates this work within the trajectory of law and society scholarship and summarizes the major fault lines in ongoing policy debates about the regulation of online activity.

This work provides an enormous contribution to the broad effort of modeling heat, mass

and momentum transport in multi-physics problems with the development of new solution approaches. It re-visits the time-honored technique of network application using flow network solutions for all transport process components for a coupled modeling task. The book further provides as formulation of the conservation laws for mass, energy and momentum,

specifically for the branches and nodes of transport networks using the combination of the Eulerian and Lagrangean modeling methods. With the extension of Bernoulli's original concept, a new solution is given for the flow field of viscous and compressible fluids as driven by the balance of mechanical energy, coupled to the thermodynamics of the transport system. Applicable to

simple or large-scale tasks, the new model elements and methods are built on first principles. Throughout the work, the book provides original formulations, their mathematical derivations as well as applications in a numerical solution scheme.

The Domain Game Cisco Press

This is the first practical treatise of its kind to approach trademark law from a fully integrated

legal and business perspective. It walks you through the major areas of trademark practice: selecting and adopting trademarks; perfecting, exploiting, and maintaining trademark rights, asserting and defending against trademark claims; and business issues in trademark ownership. You'll find clear, concise explanations and illustrative case

examples to help you take a course of action in the full range of business scenarios. This book covers every key area, including trademark selection and adoption -- trademark registration -- trade dress; conducting due diligence - - fair use of the trademarks of others -- enforcement letters -- and more. *Problems with the E-rate Program* Xlibris Corporation Almost everyone has

heard a tale of someone getting rich by selling an Internet domain name for a staggering price. But few understand the secretive world of domain investing, a game that a growing number of people are playing around the globe. The *Domain Game* chronicles the exploits of leading domain investors and explains how this mysterious market works. Learn how an

Oklahoma watermelon farmer wound up owning some of the world's most valuable Web addresses, from recipes.com to chairs.com, and how a college dropout became a multimillionaire by scooping up domains that others abandoned amid the dot-com bust. Find out how the rise of Google and Yahoo has helped boost the fortunes of domain investors. And explore the shenanigans of investors

who snag names associated with corporate trademarks. Finally, read how you can jump into this exciting market with a relatively small initial investment. It's a market with high risk, but huge potential reward. [Internet Domain Names, Trademarks and Free Speech](#) Wolters Kluwer The high profile leaps and falls of the share prices of dot.com

With reports from all major jurisdictions where the responsibility of facilitators and intermediaries for copyright and trade mark infringement have been litigated, this very useful book is the first comprehensive global survey of the liability regime that intermediaries may face when assisting others to directly infringe copyright and trade mark rights, or when providing others with the means to do so. It addresses such issues as the following: ISP liability; contributory and secondary liability for trade mark, copyright, and patent infringement;

<p>time- and geo-shifting devices and services; consumer identification through dynamic IP addresses; infringements committed on a “commercial scale”; liability of hosting providers; requirements for a breach of duty of care; notice to users to refrain from infringements; filters and other due diligence measures; “actual knowledge”; privacy and infringers’ personal data; file sharing services;</p>	<p>online storage services; and liability of transporters and freighters. After a general introduction analysing relevant aspects of trade mark and copyright law, local experts provide detailed reports on positions in the EU (at the Community level), Germany, France, Italy, The United States, Japan, Korea, Australia, and New Zealand. As well as dealing with the issues,</p>	<p>each report pays close attention to case law, legislative developments, and procedural issues of injunctive relief and damages. A final chapter covers comparative contributory patent infringement. Along with the very practical value the book offers corporate counsel charged with IP rights litigation, the authors shed light on the fundamental issue of whether</p>

attempts to broaden liability in this area are compatible with established IP principles such as territoriality, freedom to operate, and freedom of competition. As a result, the book will be welcomed by a wide spectrum of lawyers and others working in this rapidly growing field, including practitioners, policymakers, academics, and jurists.

Research Handbook on Electronic Commerce Law John Wiley & Sons
Maybe you're

a great programmer or IT professional, but marketing isn't your thing. Or perhaps you're a tech-savvy search engine marketer who wants a peek under the hood of a search engine optimized web site. Search engine marketing is a field where technology and marketing are both critical and interdependent, because small changes in the implementation of a web site can make you

or break you in search engine rankings. Furthermore, the fusion of technology and marketing know-how can create web site features that attract more visitors. The mission of this book is to help web developers create web sites that rank well with the major search engines, and to teach search engine marketers how to use technology to their advantage. We assert that neither marketing nor

IT can exist in a vacuum, and it is essential that they not see themselves as opposing forces in an organization. They must work together. This book aims to educate both sides in that regard. Cisco IOS 12.0 Bridging and IBM Network Solutions DIANE Publishing The North American Integrated Services Digital Network (ISDN) Users' Forum developed this national ISDN

solutions catalog, which explains over 30 solutions for ISDN applications that members identified as most important in a recent survey. Some of the solutions detailed include video conferences, screen sharing, facsimile, caller ID, telecommunications and file transfer. Also lists more than 120 products that 60 suppliers have identified as part of these solutions. **Practical**

Guide to LTE-A, VoLTE and IoT Cisco IOS 12.0 Bridging and IBM Network Solutions As the first form of truly rivalrous digital property, Internet domain names raise many challenges for law and policy makers. Analyzing the ways in which past disputes have been decided by courts and arbitrators, Jacqueline Lipton offers a comprehensive, global examination of the legal, regulatory and

policy issues that will shape the future of Internet domain name governance. This comprehensive examination of domain name disputes involving personal names and political and cultural issues sheds light on the need to balance trademark policy, free speech and other pressing interests such as privacy and personality rights. The author stresses that because domain names can only be

registered to one person at a time, they create problems of scarcity not raised by other forms of digital assets. Also discussed are the kinds of conflicts over domain names that are not effectively addressed by existing regulations, as well as possible regulatory reforms. Internet Domain Names, Trademarks and Free Speech brings pivotal new insights to bear in

intellectual property and free speech discourse. As such, policymakers, scholars and students of intellectual property, cyber law, computer law, constitutional law, and e-commerce law will find it a valuable resource.

Professional Search Engine Optimization with ASP.NET John Wiley & Sons The Aubin Academy Master Series: Revit® MEP is the ideal book to help readers successfully use Revit MEP. It is a concise manual focused squarely on the rationale and practicality of the Revit MEP Building Information Model (BIM) process. The book

emphasizes the process of creating projects in MEP rather than a series of independent commands and tools. The goal of each lesson is to help the reader complete their projects successfully. Tools are introduced together in a focused process with a strong emphasis on “why” as well as “how.” The text and exercises seek to give the reader a clear sense of the value of the

tools, and a clear indication of each tool's potential. The Aubin Academy Master Series: Revit MEP is a resource designed to shorten your learning curve, raise your comfort level, and, most importantly, give you real-life tested practical advice on the usage of the software to create mechanical, electrical, and plumbing designs, and calculations. Empowered with the

information within this book, you will have insight into how to use Revit MEP to create coordinated BIM project models and documentation. Revised and updated to the latest release of the software Includes practical project focused how-to exercises where readers learn by “doing”. Focused on MEP Production so readers can learn to create a coordinated BIM model and

documentation set. Written by authors with over 75 years of combined real-World architectural and MEP industry experience. Provides “Power User/BIM Manager” tips throughout.
