Dispelling the common notion that American women became activists in the fight against female cancer only after the 1970s, Kirsten E. Gardner traces women's cancer education campaigns back to the early twentieth century. Focusing on breast cancer, but using research on cervical, ovarian, and uterine cancers as well, Gardner's examination of films, publications, health fairs,

and archival materials shows that women have promoted early cancer detection since the inception of the American Society for the Control of Cancer in 1913. While informing female audiences about cancer risks, these early activists also laid the groundwork for the political advocacy and patient empowerment movements of recent decades. By the 1930s there were 300,000 members of the Women's Field Army working together with women's clubs. They held explicit discussions about the risks, detection, and incidence of cancer and, by mid-century, were offering advice about routine breast self-exams and annual Pap smears. The feminist health movement of the 1970s,

Gardner explains, heralded a departure for female involvement in women's health activism. As before, women encouraged early detection, but they simultaneously demanded increased attention to gender and medical research, patient experiences, and causal factors. Our understanding of today's vibrant feminist health movement is enriched by Gardner's work recognizing women's roles in grassroots educational programs throughout the twentieth century and their creation of supportive networks that endure today.

Cervical cancer is the second most common cancer among women worldwide. This book serves as a concise teaching manual on visual inspection with acetic acid (VIA) and with Lugol's iodine to train health personnel, especially in

developing countries, with the aim to detect this disease in the early pre-invasive phase and save women's lives. These two simple low-technology screening tests based on the ability of the trained health-care personnel to detect acetowhite areas, or yellow non-iodine uptake areas, in the cervical transformation zone are being evaluated as potential alternatives to cervical cytology.

Pelvic Floor Re-education encompasses a variety of techniques for increasing the strength of, and control over, the pelvic floor muscles. These techniques are now emerging as an effective and viable alternative to surgery in the treatment of urinary incontinence and related conditions. This volume presents a reasoned, scientific approach to the use of pelvic floor re-education. Starting with the latest theories on anatomy, pathophysiology and possible causes of pelvic floor damage, the text then describes the importance of pelvic floor evaluation in determining the type of treatment required. A number of re-education techniques are assessed including isolated muscle exercise, vaginal cones,

biofeedback control and electrical stimulation. Recent research work is also reviewed which allows the reader to evaluate the different modalities advocated in the management of pelvic floor dysfunction.

*Women and Health* is a comprehensive reference that addresses health issues affecting women of all ages — from adolescence through maturity. It goes far beyond other books on this topic, which concentrate only on reproductive health, and has a truly international perspective. It covers key issues ranging from osteoporosis to breast cancer and other cancers, domestic violence, sexually transmitted diseases, occupational hazards, eating disorders, heart disease and other

chronic illnesses, substance abuse, and societal and behavioral influences on health. In this second edition of *Women and Health*, chapters thoughtfully explore the current state of women's health and health care, including the influences of sex and gender on the occurrence of a wide variety of diseases and conditions. All chapters have been extensively updated and emphasize the epidemiology of the condition — the etiology, occurrence, primary and secondary prevention (screening), risk factors, surveillance, changing trends over time, and critical analysis of the diagnostic and treatment options and controversies. Treatment sections in each chapter have been expanded to create a stronger dialogue between epidemiologists and women's health practitioners. Saves researchers and clinicians time in quickly accessing the very latest details on a broad range of women's health issues, as opposed to searching through thousands of journal articles. Provides a common language for epidemiologists, public health practitioners, and women's health

specialists to discuss the behavioral, cultural, and biological determinants of women's health. Researchers and medical specialists will learn how the gender-specific risks and features of one organ system's diseases affect the health of other organ systems. For example: Hormone replacement therapy used to treat imbalance within the endocrine system is also being used to prevent and treat cardiovascular disease; Drugs developed for type 2 diabetes are now being used in chemoprevention. Orients the non-gerontologist about the importance of considering the entire life cycle of women within research designs and treatment plans. Professors teaching courses in women's health will use slides and additional materials to structure lectures/courses; students will use slides as a unique resource to study for exams.
