 What happens when a woman goes online? She becomes a girl. The unwritten contract of the internet, that a user is what is used, extends from the well-examined issue of data privacy and consent to the very selves women are encouraged to create in order to appear. Invited to self-construct as “girls online,” vloggers, bloggers and influencers

sign a devil’s bargain: a platform on the condition they commodify themselves, eternally youthful, cute and responsibility-free, hiding offline domestic, professional and emotional labour while paying for their online presence with “accounts” of personal “experience.” Told via the arresting personal narrative of one woman negotiating the (cyber)space between her identities as girl, mother, writer, and commodified online persona, *Girl Online* is written in a plethora of

the online styles, from programming language to the blog/diary, from tweets to lyric prose, taking in selfies, social media, celebrity and Cyberfeminism.

How to Write a Usable User Manual

Even the best information is worthless if users can't find it. Providing user-friendly structure and navigation is just as important as providing well-written content. However, structuring user assistance isn't as simple and obvious as it may seem. If you think that your document structure should follow the structure of your

product's components and functions: You're wrong. If you think that the type of document that you prefer is the same type of document that your clients prefer: You're wrong. If you think that all the information that you have is important: You're also wrong. This book tells you how to structure, index, and link your documents so that readers actually find the information that your documents contain. Topics covered: General structuring principles that all structural decisions

have in common. Choosing media: Should you provide a printed or printable user manual (PDF), online help, or both? What information should go into the user manual, and what information should go into online help? Which help format should you use? Can context-sensitive help calls be implemented? Should you provide interactive features and social features? Planning documents: Should you put all information into one document, or should you supply several user

manuals for specific purposes and user groups? How should you name your documents? Planning document sections: What are the major sections that your documents should consist of? Are there any standard sections that you shouldn't forget? Planning topics: What types of information do your clients need? How should you build and name the individual topics within the document? Planning the order of sections and topics: How should you organize the

sections and topics within your documents? What comes first? What comes later? Planning navigation: Which navigational devices should you provide in printed documents and in online help systems? Where should you provide links or cross-references and where not? Audience: Technical writers
